# Procountor's new features in version release 27.0

## Summary

New features in this release:

- Possibility to remove bank statement allocations
- Possibility to remove reference payment allocation
- Procountor Key is now Finago Key

## Details

| | |
|---|---|
| Possibility to remove bank statement allocations | We released a new functionality for removing bank statement allocations from allocated bank statement events to invoices. With this functionality, it is possible to correct bank statement event allocations that have been allocated incorrectly. <br><br> The new functionality can be found from all *Invoice search* views under **More actions** > *Bank statement allocation*. On the *Bank statement allocation* view, the allocation is removed by selecting the bank statement event and clicking **Remove allocation**. After having removed the allocation, the bank statement event can be allocated again in the same view. |
| Possibility to remove reference payment allocation | We released a new functionality to remove reference payment allocation from sales invoices. The new functionality is located under *Payments* > *Bank statements and reference payments* > Select **Edit reference payment** and **Remove allocation**. <br><br> Payment allocations and transactions can be removed one by one or as a bulk action. |
| Finago Key | Procountor Key is now Finago Key. The functionality of the application remains the same. For now, the only new feature includes a new verification email to the user after Finago Key has been taken into use. <br><br> Depending on the updating settings on your phone, the new version can be uploaded automatically, or you can go to the application store (Google Play, App Store) to download the new version manually. The Finago Key app is not supported in Windows phones. |
